

## Joining Users and Mobile Platforms - JUMP Plan

Until now, finding an affordable mobility solution was daunting, especially when a company required an end-to-end solution that combined consultation, hardware, software, implementation and ongoing support.

But PiiComm has transformed the landscape, making premium technology and intelligence more accessible. PiiComm, a customer-centric company, provides organizations with total enterprise mobility, Mobile Computing, RFID, WLAN, Barcode, Scanning and Mobile Printing solutions. We deliver the expert communications support you need to advance your business within today's rapidly evolving technology market.

### JUMP Into Action

PiiComm is the only company in Canada to offer a low monthly payment plan that includes all hardware, software, implementation and ongoing Mobile Service Desk support throughout the contract life. Our Joining Users and Mobile Platforms (JUMP) Program accelerates access to all of the enterprise-level mobile computing solutions you need. We've also extended your technology investment across several years to make monthly payments manageable and affordable.

- Launch an advanced mobile solution immediately
- Boost productivity and profitability
- Realize a rapid return on your investment
- Maximize customer satisfaction
- Minimize waste and fuel consumption

For as low as \$60 per user per month\*<sup>1</sup>, our one-of-a-kind program makes it easy for you to pay as you go, boost cash flow, finance essential equipment and software, and gain a powerful competitive advantage. JUMP into action, today, and enjoy all of the benefits of our enterprise-level mobile solution including personal consultation, hardware, software application integration, implementation and ongoing support through our Mobile Service Desk.

## Making Mobile Possible.

The JUMP Program by PiiComm provides advanced mobile technology and end-to-end support, with manageable and accessible monthly payments. PiiComm is proud to be a premier select Motorola partner, with financing available on ES400, MC55 and MC75 mobile devices.

*Automate Processes.* Stop using paper entry systems and reduce time and errors. Stop entering data once in the field and again at the office. Cut cost and administrative time by empowering field service technicians with the tools they need to enter information just once. Then synch data with your office database automatically.

*Track Assets.* Barcode readability means you can now track your assets, such as tools, truck stock, materials and valuables, to better protect your investments. You can also set-up the system to trigger events when stock is low or items are not returned. Plus, GPS technology enhances employee safety.

*Eliminate Phone Dispatching.* Dispatching service tickets and work orders are faster, easier and more cost-efficient with field mobility technology. Enter tickets just once in your work order management system. Then let your mobile solution handle the rest by triggering an electronic notification to your field service technician.

*Minimize Fuel Cost.* When you provide clear driving directions or links within each electronic work order complete with GPS and mapping capabilities, you reduce travel time and minimize fuel consumption. Data synchronization from the field to the central database application further eliminates travel and the associated fuel cost involved in delivering paperwork to the office.

*Boost Customer Service.* Provide customers with the answers they need in real-time. The JUMP Program gives you immediate access to enterprise part, order and inventory information, as well as customer history, product documentation, warranty information, timesheets and work schedules while in the field. The same mobile technology can be used to route field service technicians to job sites faster and more efficiently, boosting service delivery.
